

Wagware Systems, Inc.

CASL

WAGWARE Systems, Inc. and **Brainyware, LLC** are providers of world-class cross platform development tools for creating mobile applications. We provide tools for creating applications for the PalmOS®, PocketPC/Windows Mobile and Windows using a single Integrated Development Environment (IDE). Our products are used by thousands of developers world-wide and in nearly every industry. CASL, our flagship product, was first released in 1996 making CASL one of the earliest supporters of the PalmOS®.

CASL (Compact Application Solution Language) is a development environment which allows developers to create applications for PalmOS®, PocketPC / Windows Mobile and Windows platforms. CASL is the ideal Rapid Application Development (RAD) environment for mobile application developers that want to create compact applications on multiple platforms quickly, using a single code base. There are no run-time royalties to distribute CASL applications to end-users of CASL applications. This makes CASL particularly attractive to corporate and commercial developers. CASL strikes an optimum balance of core capabilities, extendibility and features on all three (3) supported platforms.
